

# GeoCost - assessment of groundworks and foundation reinforcement costs for buildings

# Sweden, covered by ice ~20.000 years ago...

[http://www.geus.dk/viden\\_om/voii/ilulissat-uk/voii03-uk.html](http://www.geus.dk/viden_om/voii/ilulissat-uk/voii03-uk.html)

<https://commons.wikimedia.org/wiki/File:Weichsel-W%C3%BCrm-Glaciation.png#/media/File:Weichsel-W%C3%BCrm-Glaciation.png>

This has shaped soil formation of Scandinavia, Canada etc -  
important for foundation reinforcement methods

# What is GeoCost?

- An ArcGIS-based tool (Models) for estimating foundation reinforcement costs in municipal development (and infrastructure\*)
- GIS + Geotechnical engineer
- Large savings can be made by placing constructions in areas with the most favorable geotechnical conditions.
- Quickly calculates (alternative) costs for cut/fill, foundation reinforcement etc. Detailed elevation and soil data is used.
- Financed by the Swedish Government

<http://www.swedgeo.se/geokalkyl/>

# Illustration of foundation reinforcement cost per m<sup>2</sup> and suggested reinforcement method

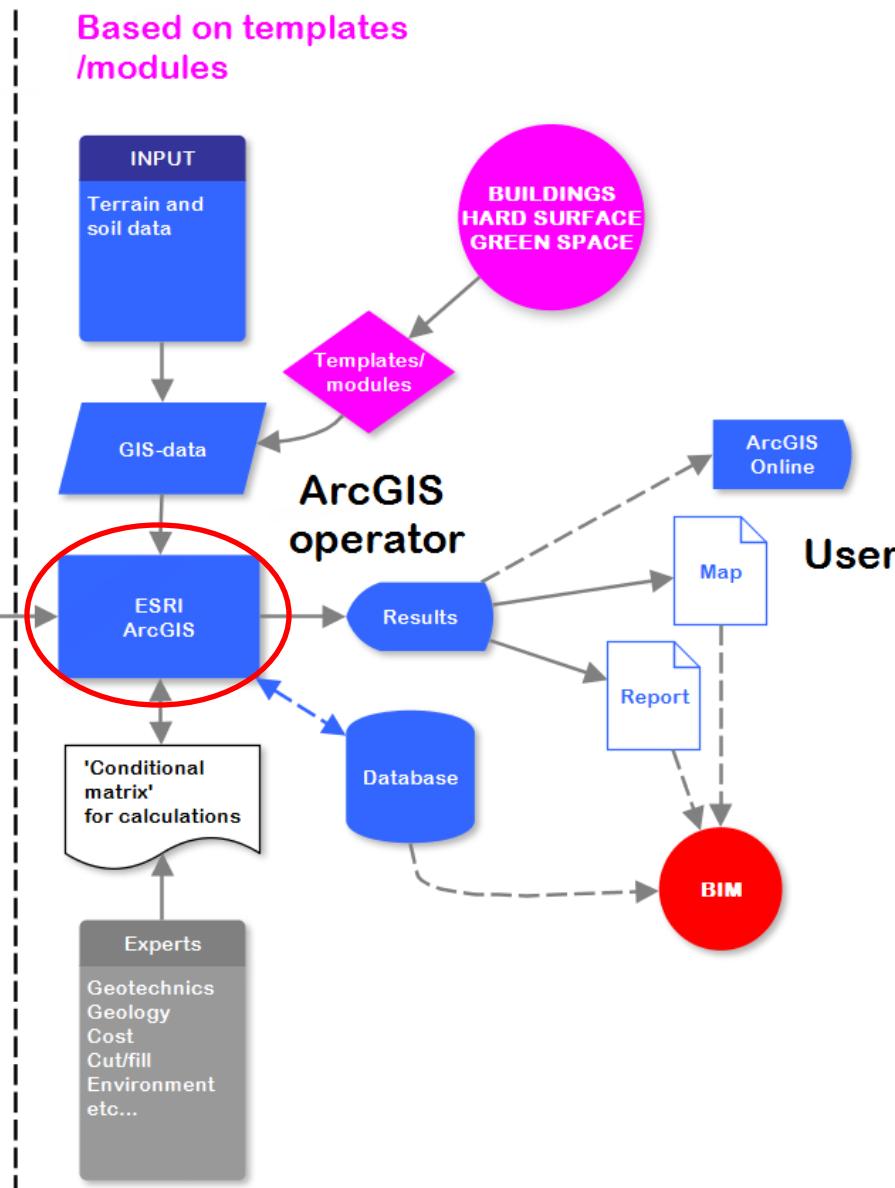

Also summaries of **TOTAL cost** and **TOTAL cut/fill volumes**

# System workflow

If digital community development plan exists

Communities/  
consultants

Based on templates  
/modules

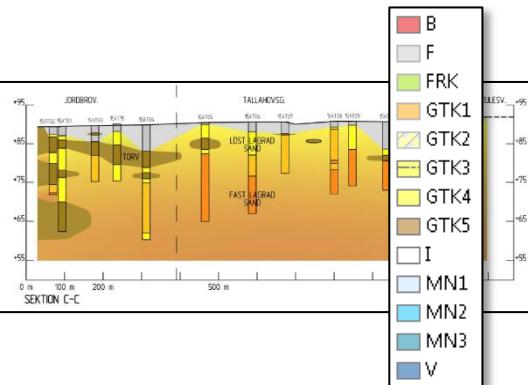

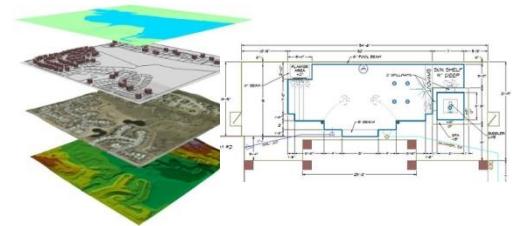

## Skills requirements:

- ArcGIS operator
- Geotechnical engineer

## Software requirements:

- ArcGIS Desktop 10.2+
- 3D-analyst
- Microsoft Excel 2010+

Villkorssätt 1 (GTK1, Silt)

Prepare input data

- 1) Buildings (incl. height etc), 2) Hard surfaces (road etc), 3) Green space (vegetation)
- Terrain data (e.g. 2m raster); Soil geology

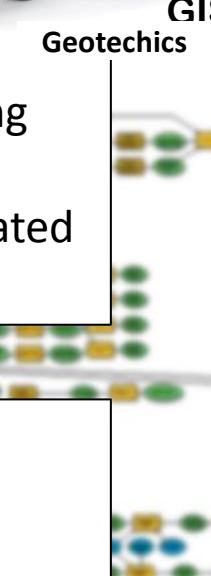

Calculate foundation depth & cut/fill volumes

Based on "Geotechnical Terrain Class" classification (soil profile down to bedrock)

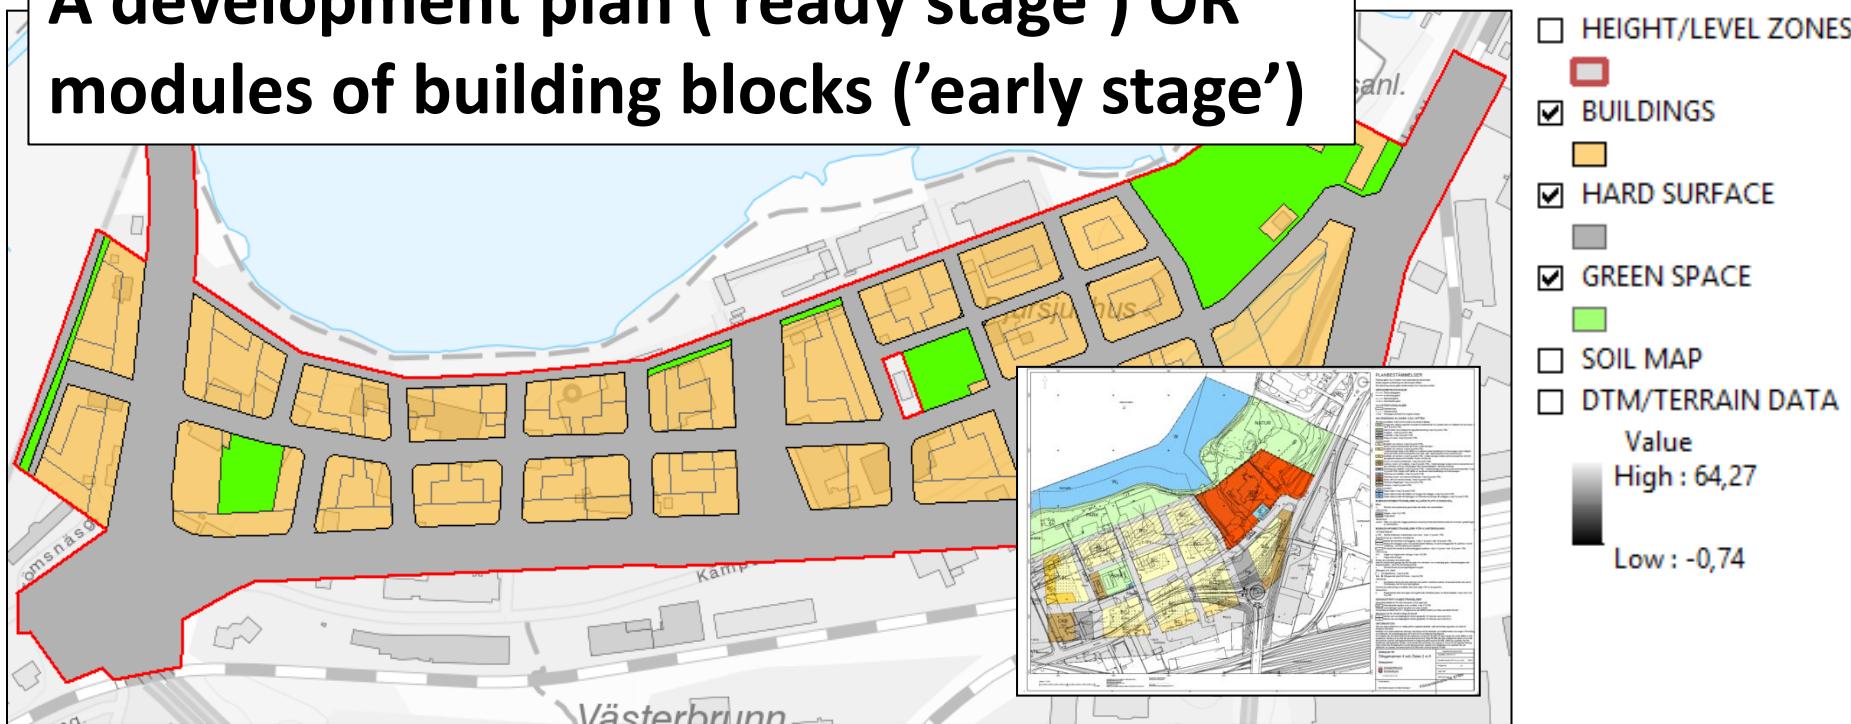

Calculate costs/ generate 3D scene

Based on Excel 'condition matrix', calculated using a series of ArcGIS Models

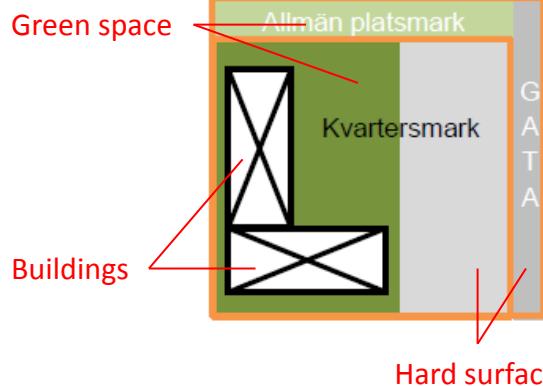

GIS  
Geotechnics

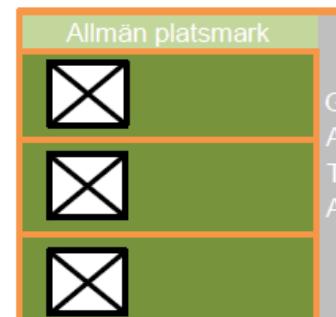

# A development plan ('ready stage') OR modules of building blocks ('early stage')

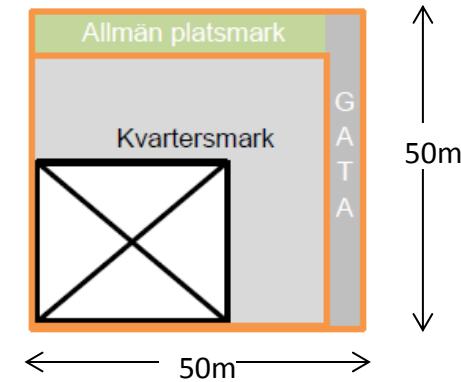

Type 1

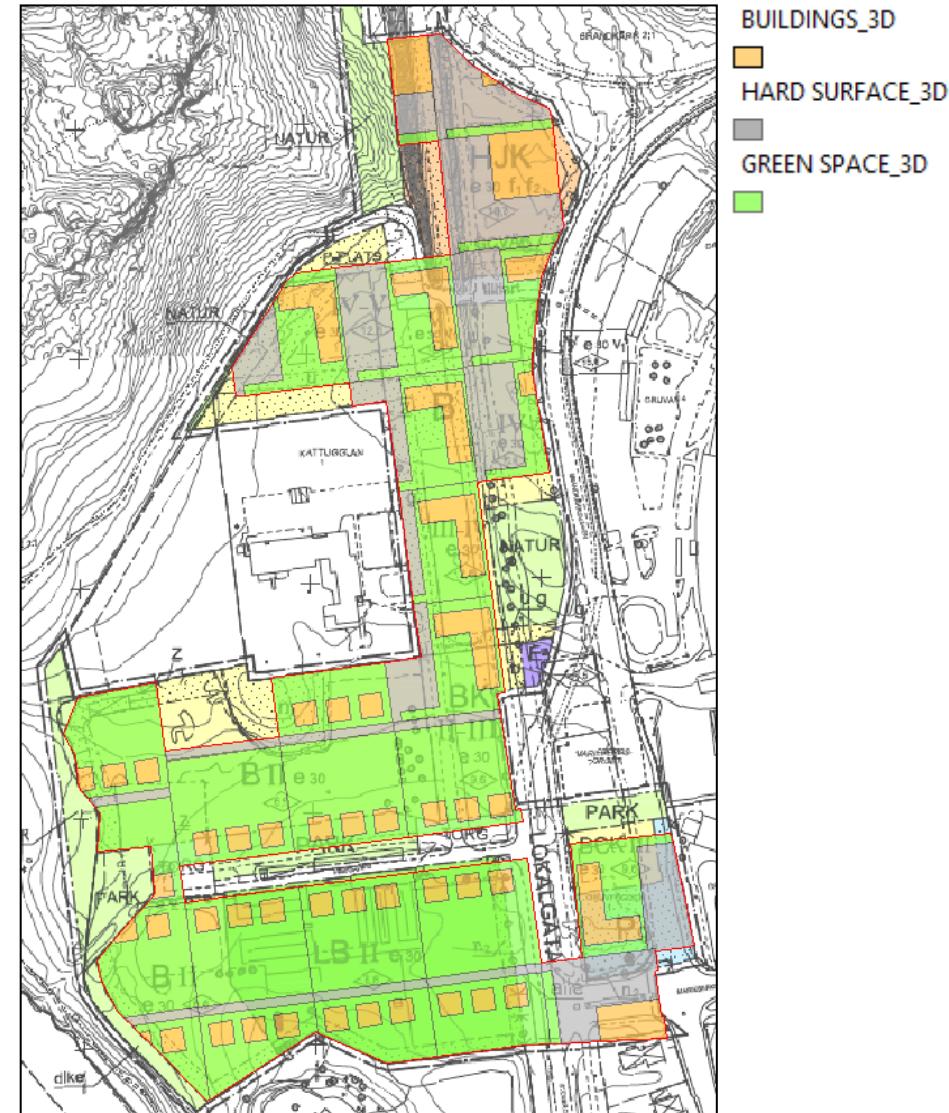

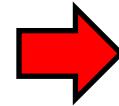

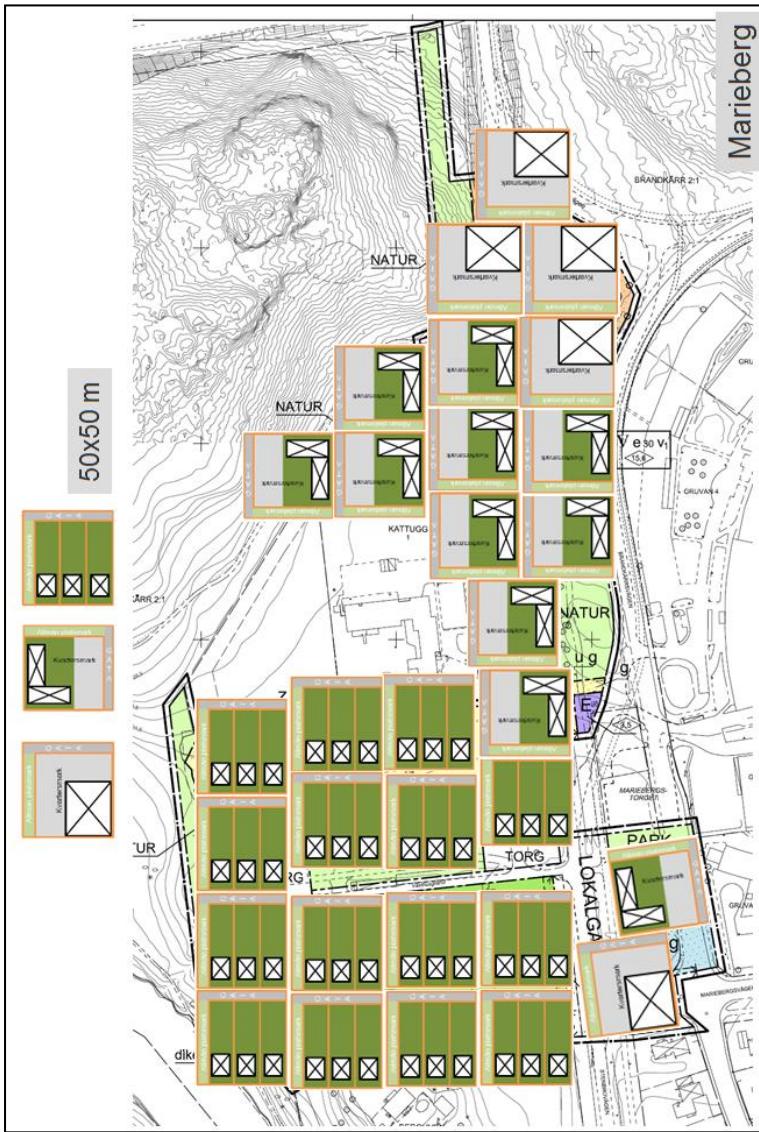

Type 2

Type 3

## Example of placement of modules and making consistent GIS-surfaces

\*) consistent = adjacent, non-overlapping buildings; hard surfaces; green space

## Suggested reinforcement method

- Step 2 - REINFORCEMENT METOD
- BUILDINGS
  - Reinforcement method
    - No action (Green)
    - Piling (Brown)
    - Dig out/refill (Diagonal lines)
- HARD SURFACE
  - Reinforcement method
    - No action (Green)
    - Pre-load (Blue)
    - KC Pile (Red)
    - Pile (Brown)
    - Dig out/refill (Diagonal lines)
- GREEN SPACE
  - (Green square)

## Cost (for reinforcement) in Swedish Krona/m<sup>2</sup> [2D display]

- Step 3 - COST Sek\_m<sup>2</sup>
- BUILDINGS SEK/m<sup>2</sup>

- 0 - 100
- 101 - 200
- 201 - 300
- 301 - 400
- 401 - 500
- 501 - 600
- 601 - 700
- 701 - 800
- 801 - 900
- 901 - 1 000
- > 1000

E.g. 1000 SEK ~ 100 US\$

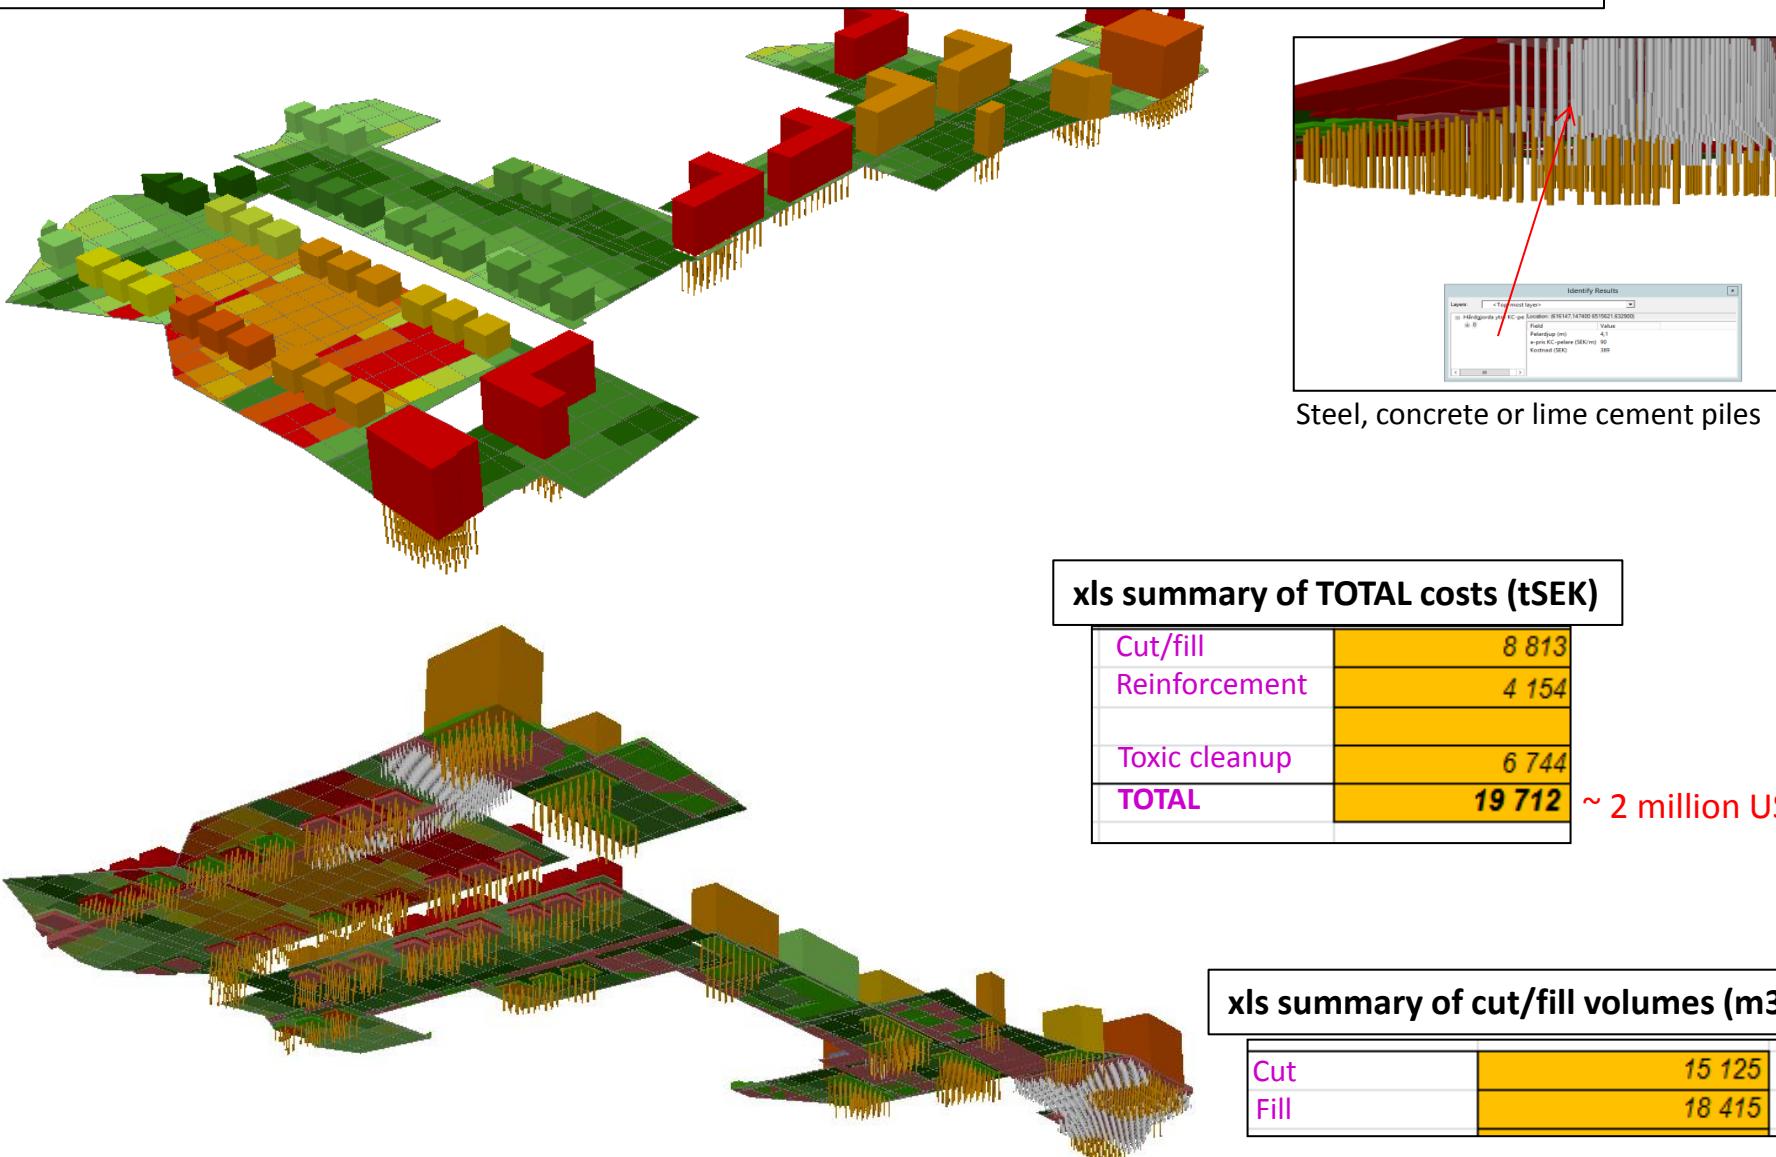

- GREEN SPACE SEK/m<sup>2</sup>

- 0 - 100
- 101 - 200
- 201 - 300
- 301 - 400
- 401 - 500
- 501 - 600
- 601 - 700
- 701 - 800
- 801 - 900
- 901 - 1 000
- > 1000

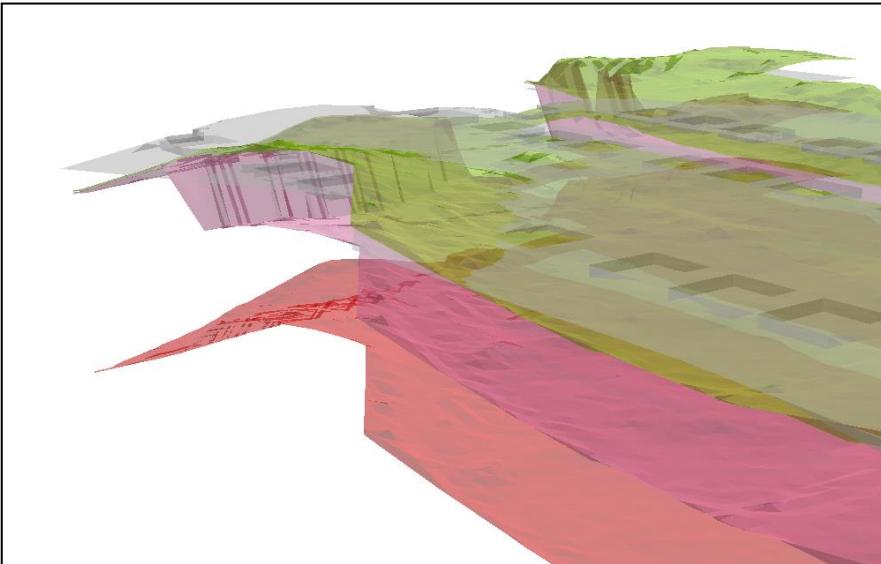

- HARD SURFACE SEK/m<sup>2</sup>

- 0 - 100
- 101 - 200
- 201 - 300
- 301 - 400
- 401 - 500
- 501 - 600
- 601 - 700
- 701 - 800
- 801 - 900
- 901 - 1 000
- > 1000

## Cost (for reinforcement) in Swedish Krona/m<sup>2</sup> [3D display in ArcScene]

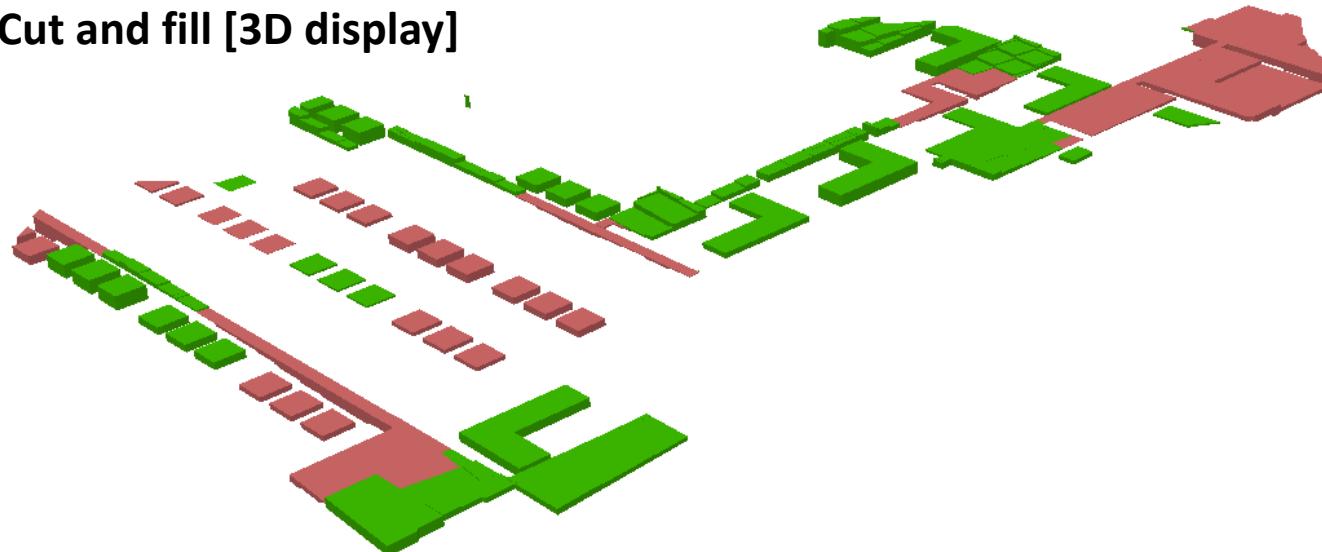

## 3D, top surfaces for various levels

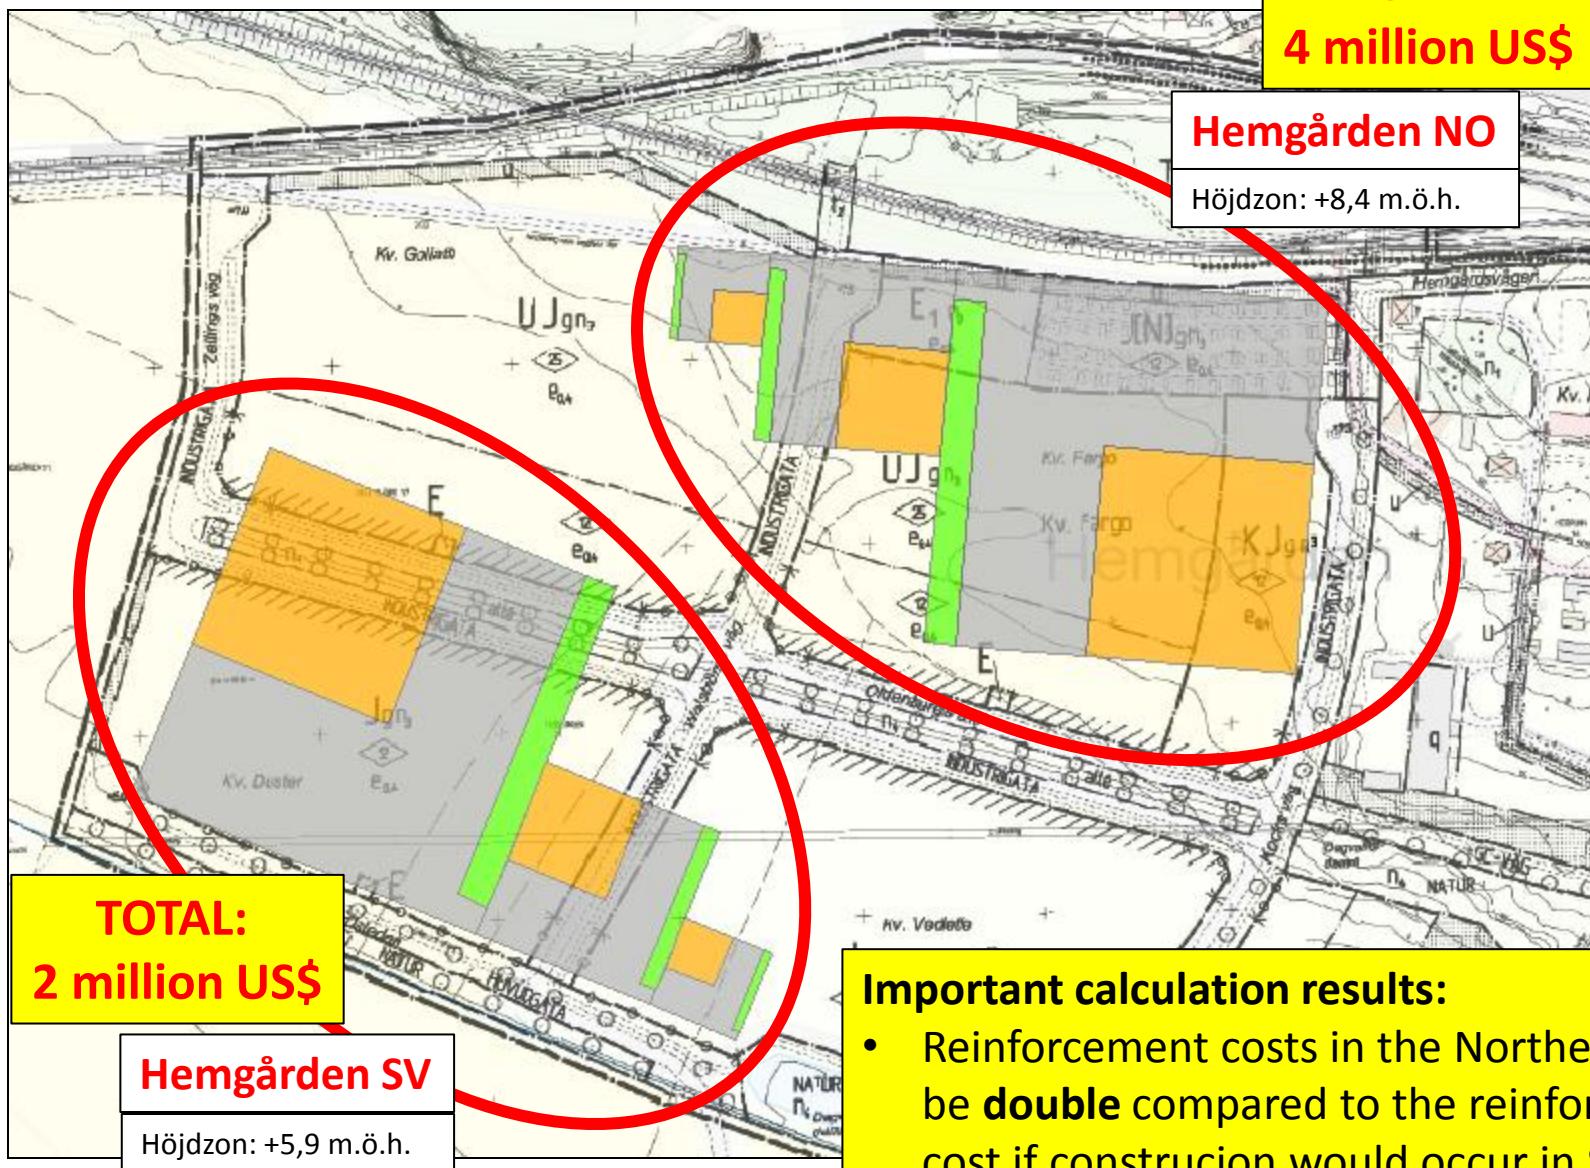

- Step 3 - 3D TRIANGLE MODEL
- Level New (projected/to be constructed)  
[Grey square]
- Level Existing (according to terrain data)  
[Light Green square]
- Level Friction soil  
[Pink square]
- Level Bedrock  
[Red square]

## Cut and fill [3D display]

- Step 3 - 3D BUILDINGS
  - Buildings Piles  
[Orange line]
  - Buildings Cut  
[Green block]
  - Buildings Fill  
[Red block]
- Step 3 - 3D GREEN SPACE
  - Grönytor Schakt  
[Dark Green block]
  - Grönytor Fyll  
[Red block]
- Step 3 - 3D HARD SURFACE
  - Hard Surface Cut  
[Green block]
  - Hard Surface Fill  
[Red block]

Two alternative locations for the same set of buildings...

**Important calculation results:**

- Reinforcement costs in the Northeast would be **double** compared to the reinforcement cost if construction would occur in Southwest.

# EXTRA

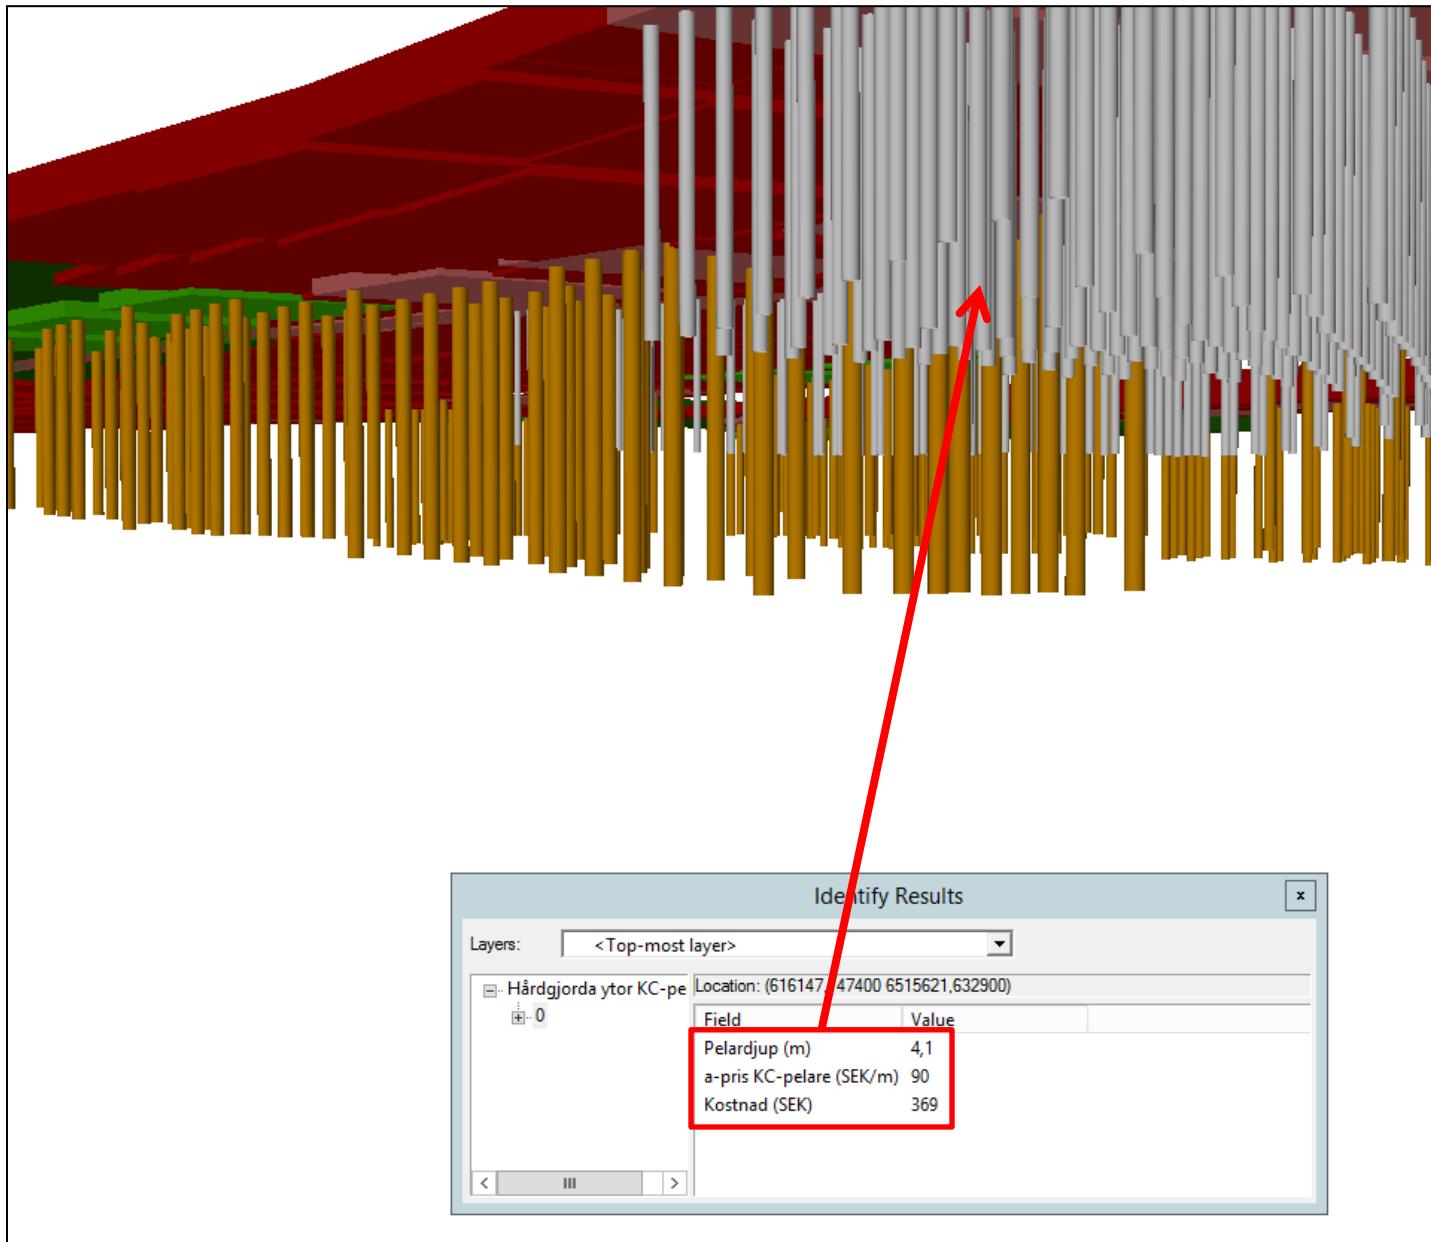

# GTK Geotechnical Terrain Class must be evaluated by geotechnical engineer The soil profile to bedrock may vary considerably!

Marktyp	Geoteknisk terrängklass	Beskrivning	Symbol
Lös mark	GTK1	Älvsediment, silt eller mycket siltig jord i denna klass.	GTK1
	GTK2	MoränLera eller Lera, fast till mycket fast lera. Reducerad skjuvhållfasthet över 60 kPa.	GTK2
	GTK3	Lera–silt (postglacial eller glacial). Lera eller siltig lera med reducerad skjuvhållfasthet över 20 kPa och under 60 kPa.	GTK3
	GTK4	Lera–silt (postglacial eller glacial) Lös lera eller sulfidjord. Reducerad skjuvhållfasthet under 20 kPa.	GTK4
	GTK5	Torv (kärr eller ospecifierat) och organisk jord.	GTK5
Fast mark	FRK	Gravitationsjord, sand–block (postglacial eller ospecifierat), flygsand, sten–block (glacial eller postglacial), isälvsediment, sand–block, talus.	FRK
	MN1	Morän, siltmorän, siltig Morän	MN1
	MN2	Morän, sandig eller siltig sandig morän	MN2
	MN3	Morän, sandig eller morän ospecifierat, bottenvorän, mkt blockig morän, blockjord.	MN3
	B	Urberg eller ospecifierat berg.	B
	F	Fyllning	F
	V	Vatten	V
	I	Is	I
